

SMI

Selim Ach

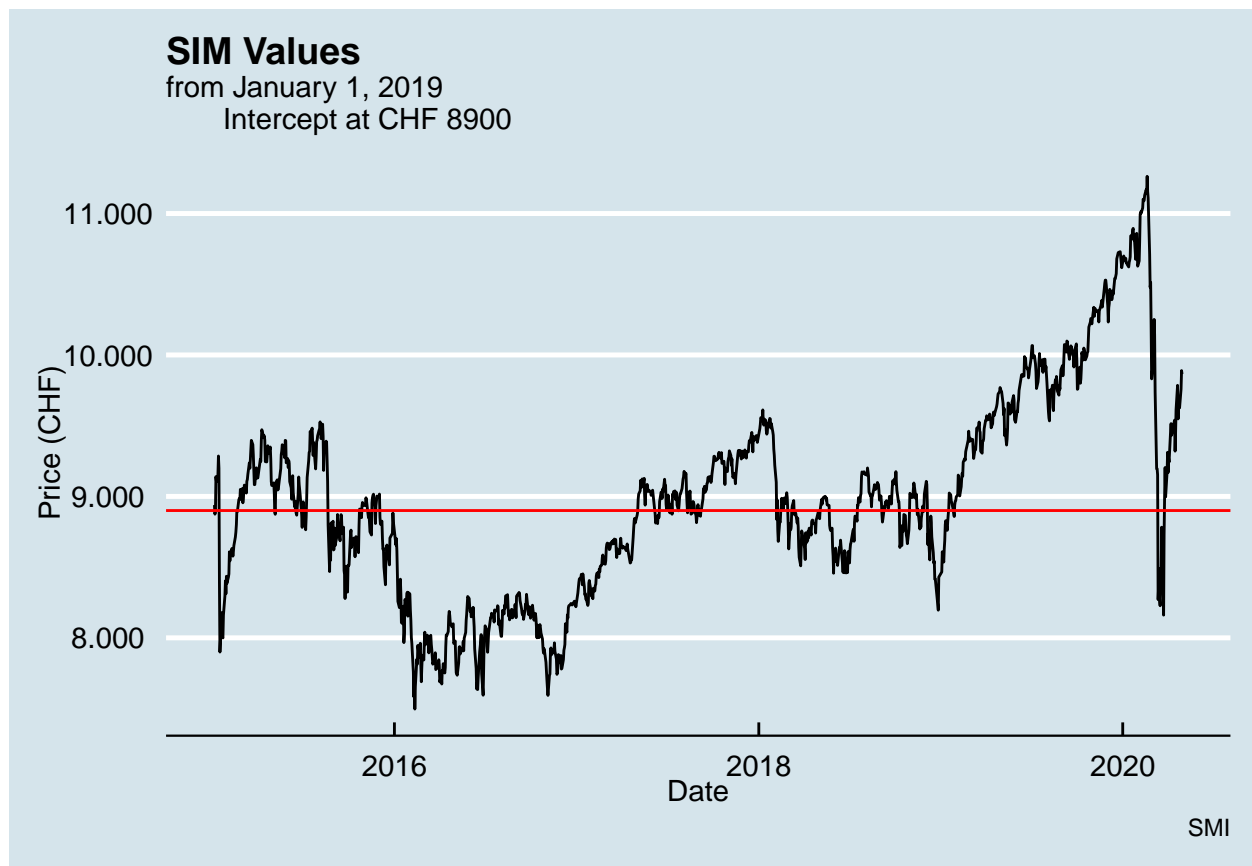

10/17/2020

The objective of this report is to provide an example of a high frequency chart with the possibility to change the scale at which information are displayed (change frequency and time frame), but also add specific information on the chart itself.

A lineplot (from January 1, 2015 to April 29, 2020) indicating the fluctuation of the SMI index.

A lineplot with a red line indicating a threshold is added to the plot.

Another interesting feature is to add another chart to zoom or to show the general trend of the time series.
